## Discover a new generation of engraving machines...

2006 will see the launch of a new generation of engraving machines from Gravograph. We guarantee you it is something you have never seen before...

Discover this well kept secret hidden inside our Gravomobile.

## Take a look at our new range of engraving materials

Gravograph has one of the largest ranges of engraving materials and accessories. From engraving laminate to pet tags and Twincut cutters, you will find everything you need within our range.

And you will also get a **free material voucher** to spend on any item from our catalogue.

## One-off upgrade and trade-in offers

### Software upgrade

Is your software out of date? Not compatible with Windows 2000 or XP? Or simply just too limited?

Now is the time to have a close look at it.

### Machine upgrade

Is your machine computerised but not PC-linked? We may be able to upgrade it.

### Machine trade-in

Is your machine too slow, too limited, too small or simply getting tired?

Whatever its age, type or size, take advantage of one-off trade in prices available during our roadshows and save £££.

We will also trade-in **non-Gravograph machines!**

## Do you know your C02 from your YAG? Lasers explained...

Do you know that Gravograph is one of the largest laser manufacturers in the world? From C02 retail lasers to YAG high performance system, our range of lasers covers all needs.

### What are C02 lasers?

C02 is the most popular system for general marking and engraving applications. They are fast and easy to use, with no item clamping required. They work extremely well on plastic, coated metal and any 'organic' material such as wood, paper, rubber, glass, etc. They are used for engraving as well as cutting out.

From compact and economical lasers to large powerful systems, there is a C02 for all budgets and applications.

*LS800-80W C02 laser*

### What are YAG lasers?

Working on a moving mirror technology, YAG lasers are incredibly fast – able to mark several lines of text in a few seconds.

They are primarily used for metal marking but also work extremely well on plastic. They are popular with engineering companies, toolmakers, giftware companies and more generally anyone with any high volume marking requirements.

### Want to know more about lasers?

Our Gravomobile is fitted with the latest C02 and YAG lasers. Take advantage of one-to-one presentations and see for yourself what lasers can really do.

Feel free to ask us to mark any of your samples.
